DRILLING DOWN TO A SINGLE TRUTH
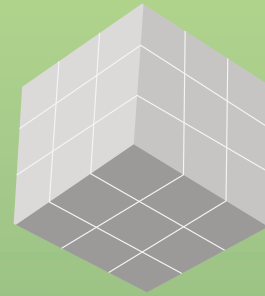

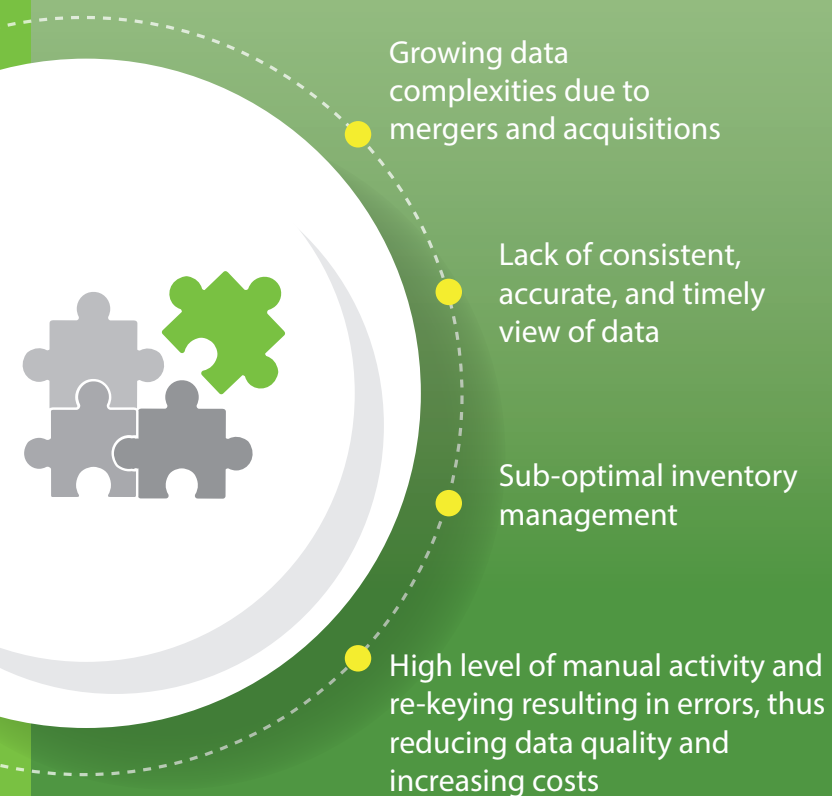

Data Cleansing of global material
and vendor masters for ERP rollout.

Infosys®
BPM

The client is a
global mining organization.

CHALLENGES

The client had data spread across various systems and multiple languages leading to challenges such as:

- Growing data complexities due to mergers and acquisitions

- Lack of consistent, accurate, and timely view of data

- Sub-optimal inventory management

- High level of manual activity and re-keying resulting in errors, thus reducing data quality and increasing costs

SOLUTIONS

To deploy efficient, customized data management processes, the Infosys BPM team:

- Defined the data cleansing process

- Moved all the material master data, post cleansing and enriching, to one ERP platform

- Supported the master data management on an ongoing basis

- Created one master managed in two languages – French and English

- Completed the project as per schedule

BENEFITS

Infosys BPM's solution ensured that the client had:

- A consistent view of material master

- Only one source of truth

- Better inventory control because of optimized inventory and optimized inventory management cost

- One master maintained in two languages

- Less downtime because of improved parts availability as a result of clean material master

65%
Improvement in data enrichment

~825k
Material migrated from French to English

50%
Reduction in search time
